REACT mobile

Charging Case

The Charging Case provides centralized charging for the React Mobile LoRa (LoRaWAN) Panic Buttons and eliminates tangled charging cables.

This charging case is only for charging the designated LoRa Panic Button. The panic button can be charged individually or together (up to 40 at a time).

When charging, please insert the panic button into the slot of the charging box. During charging, there will be an icon displayed on the panic button's screen indicating charging status. After charging, you can directly press the panic button to light up the display and check the battery icon to confirm if it's fully charged.
