

## LoRa Panic Button

The React Mobile Long Range Wide Area Network (LORAWAN or LoRa) Panic Button is an all in one solution capable of protecting employees both on and off property without the need for a tethered smart device.

LoRa is a standard wireless network protocol that enables very long distance and high penetration for applications that don't need a lot of bandwidth. It's ideally suited for the short and sweet messages of the React Mobile workplace safety platform.

With a wide range of coverage, it only takes a few inexpensive LoRaGateway devices to cover a facility. These gateways are connected to the internet to provide the "last mile" of network access to our buttons.

### KEY FEATURES

- Can be worn as a wearable watch or pager/ keyring.
- Freely available wireless spectrum.
- Nordic 52840 chipset as the platform, which can save more power and energy than any others.
- Monitor time and battery life.
- Easy integration with existing LoRa Gateways.
- Dimensions: 49x44x14.4mm.
- Does not rely on cellular coverage.
- IP67 rating.
- 902-928 MHz frequency rate.
- 600mAh battery capacity.

## REACT MOBILE: STAFF SAFETY SOLUTIONS

The hotel industry is improving the safety of hotel workers everywhere.
