

Cellular LTE Panic Button

The React Mobile Cellular LTE Panic Button is an all-in-one solution capable of protecting employees both on and off property without the need for a tethered smart device.

Our cellular LTE panic button has been redesigned into multiple form factors from the ground up to provide a robust, simple wearable device that staff can access quickly and discreetly to call for help when assistance is needed. Unlike our Bluetooth® Panic button, it does not need a paired mobile device and is instead capable of connecting to the available cellular network.

The panic button device consists of a small slim form factor, running on internally developed firmware. This device is capable of significant longevity (life) expectations that far exceed standard panic button devices.

KEY FEATURES

- Latest generation ARM Cortex M4 processor paired to a cortex M0+ BLE radio. Utilizes a 9160 Nordic chipset driving an HCI communicating with the NRF 52811 chipset.
- Single-button interface with retentive force feedback in a form factor that conforms to the hand.
- Housing is military-grade ABS composite (IP53 resistant to water and dust intrusion) with low propagation properties to allow the BLE to function at peak performance efficiency.
- Power can be switched on or off.
- Drop-resistant up to 10 meters.

- Tricolor pipe RGB LED.
- Field upgradeable firmware via OAD/OTA firmware updates.
- Reverse compatible to all previous versions of our application.
- Compatible with third-party hardware.
- Works across the broad spectrum of 650 - 2200 MHz. Capable of connecting to LTE-Cat M/M1.
- A next-generation rechargeable battery technology that provides rapid charging and battery life 30 days between charges.
- Dimensions: 2.14in (W) x 2.24in (H).

REACT MOBILE: STAFF SAFETY SOLUTIONS

The hotel industry is improving the safety of hotel workers everywhere. When your reputation is on the line, we understand that finding the right solution to protect your employees can be overwhelming. React Mobile guarantees that our safety devices put you in compliance with legislation or your brand's standards.
